Adaptions of the project design: Skills and Personality (SKIPPER)

The Authors

DESCRIPTION

This document summarizes the changes made to the study design for the main SKIPPER study (information on description and background: https://osf.io/sfnwt). The primary changes are illustrated in Figure 1.

Instead of having two measurement occasions before the skill training (intervention), there is now only one. Additionally, the waiting time between the first measurement occasion (1) and the learning-with-training selection session (2) prior to the intervention has been reduced. The intervention itself lasts for six weeks (3).

During the intervention, participants receive invitations on Sundays and reminders for their participation on Tuesdays. From weeks two to six, participants can select their intervention tasks until Wednesday, 8 p.m. If they fail to do so within this schedule, they cannot select tasks for that week and must wait until the following Sunday to select training tasks for the next week. In such cases, they receive a friendly reminder. This approach ensures that participation is completed within six weeks.

In week seven, as in all previous weeks, participants are asked to reflect on their most recent week. This step is incorporated into the third measurement occasion (4) (cf. Figure 2). Additionally, a follow-up measurement is planned (measurement 3) to assess lasting effects ((5) in Figure 1).

MEASURES

Several psychological constructs are assessed using distinct measures. An overview of all included measures is provided in Table 1.

Table 1

Measures within the SKIPPER study

Demographic variables: sex, age, education, working status
Behavioral, emotional, and social skills inventory in German language (BESSI-G, Lechner et al., 2022)
Unified motive scales (UMS, Schönbrodt & Gerstenberg, 2012)
Narcissistic admiration and rivalry questionnaire (NARQ, Back et al., 2013)
Big five inventory-2 (BFI, Danner et al., 2019)
Self-esteem (3 items)
Self-oriented perfectionism (Stöber, 2012)
Short-form of the positive and negative affect scale (Breyer & Bluemke, 2016; Thompson, 2007) Other affective states: serenity (*at ease*, *calm*, *relaxed*); *enthusiastic* (positive affect); *distressed* (negative affect) (Röcke & Grühn, 2003)
Life satisfaction (L1, Beierlein et al., 2015)
